# Services

- **Build up of a „CE“ - documentation**
  - § Structuring of the so-called “technical documentation” into functional areas - interfaces including standard help, trainings – information, training report samples
- **Realisation of risk analyses**
  - § Product/process risk analyses according to product standards e.g.: EN 1539 (Type C standard) or according to EN 1050 (Type A standard).
- **Standard and directive research**
  - § Includes a verification, which European directives and harmonised standards respectively are applicable for product-interfaces and the surrounding. Only the compliance of these documents allows to manufacture the products and bring them on the European market law-conform as well as according to the engineering rules.
- **Control list**
  - § Verification of the manufacturer’s declaration and declaration of conformity respectively, transmitted by the machine/component supplier, on completeness and directive-conformity.
- **Risk-countermeasures**
  - § Elaboration and verification of realisation of all risk-countermeasures on the product interfaces.
- **Declaration of obvious deficiencies**
  - § On integrated/bought-in machines/components – obvious deficiencies will be identified (duty to warn).
- **Verification of the operation manual**
  - § Verification of the integrated components on accordance with the requirements of the European directives and standards.
- **Preparation of the EC-declaration**
  - § Preparation of necessary
    - declarations of the manufacturer for part-machines (components)
    - declarations of conformity for complete machines
- **Machine check-up**
  - § Check-up of the safety-related equipments of the machine regarding conformity with the applicable regulations.
